Java History

- Java has been released on May 23rd 1995
- Initiated by Sun Programmer Patrick Naughton, who planned to leave Sun and wrote an e-mail to Sun CEO Scott McNealy about his dissatisfaction (hint: don't do this unless you play ice hockey with your CEO!)
- Naughton wanted easy-to-install and easy-to-maintain hardware
- In 1991, Naughton was allowed by McNealy to start an (initially one year budgeted) project together with James Gosling and Mikde Sheridan (Project Green)

Java History

- Initial focus was the integration and control of household (embedded) devices such as toasters, VCRs, etc.
 - -> IOT (Internet of Things) w/o the Internet
- The WWW/Internet where not targeted initially
- Project Green included an own Operating System (Green OS),
an Interpreter (Oak), an own graphic sub-system, and hardware components
- Project Green initially developed also an own PDA (*7 "Star Seven"), which was also productised (company First Person, Inc)
- However, *7 never took off and was finished by April 1994

Java History

- Sun developed in Autumn 1994 an Oak-enabled Browser "WebRunner" (developed in Oak) which was able to view "Java Applets" (today known as HotJava realised in 1995, see <http://tinyurl.com/v857>)
- However, the Netscape Browser dominated the market
- Java took off since Netscape licensed it and integrated it into Netscape
- JDK 1.0 (Java Development Kit) was release in January 1996
- Numerous Java Applets where developed to show Java's potential
- The development of Java from that time on was continued by JavaSoft (remaining members of the Green Project team)

Java History

- 1996: Java Component Architecture (Client side) JavaBeans supported by companies such as Borland, Lotus, Oracle, IBM, Netscape, Symantec
- 1996: Release of JDK 1.0
- March 1997: Release of JavaOS 1.0 (complete OS written in Java)
JavaOS was discontinued by Sun from 2006 on
- CeBIT 1997: Introduction of the JavaStation (thin client for Java Applications)
First Java Processor "PicoJava"
- December 1998: JDK 1.2 aka "Java 2 Platform" (Swing Toolset, Drag-and-Drop API, ...)

Java History

- May 2000: Release of JDK 1.3 (improved performance)
- ...
- December 2006: Release of Java 6 (JavaScript support, Web Service API, Database Manager, ...)
- December 2007: Transfer of Java technology toward GPL (General Public License)
- April 2009: Oracle acquires Sun for about 7.5 billion USD
- March 2014: Java 8 released (1st LTS-Version), 9/10 Non-LTS
- September 2019: Java 13 released

Java as a "Platform"

- Here: Platform === Runtime Environment
- Java Platform, Standard Edition
 - JDK (Java Development Kit)
 - JRE (Java Runtime Environment)
- Java Platform, Enterprise Edition (distributed enterprise applications)
- Java Platform, Micro Edition (now: phoneME, targets small devices such as handhelds or mobile phones)
- Java Platform, Card Edition (smartcard support)

Sun's Marketing of Java

- Simple
- Architecture neutral
- Object-oriented
- Portable
- Distributed
- High performance
- Multithreaded
- Robust
- Dynamic
- Secure

Exercise 1.1
